

Dear all,

It was a pleasure for IMV Technologies to welcome you at this dinner and to discuss with you about the field that drives us and fascinates us on a daily basis.

Below is a souvenir picture of a pleasant time spent together 😊 !

We would also like to thank you for participating in the questionnaire and share with you the key elements.

Please do not hesitate to contact us with any questions you may have.

Thanks to those who completed the questionnaire, 7 countries were represented.

The distribution of insemination actors differs from one country to another, it is distributed as below in the graph.

You are 82% to do postpartum control in addition to inseminations, for the most part thanks to rectal palpation and ultrasound. Very few use vaginal palpation or a vaginoscope.

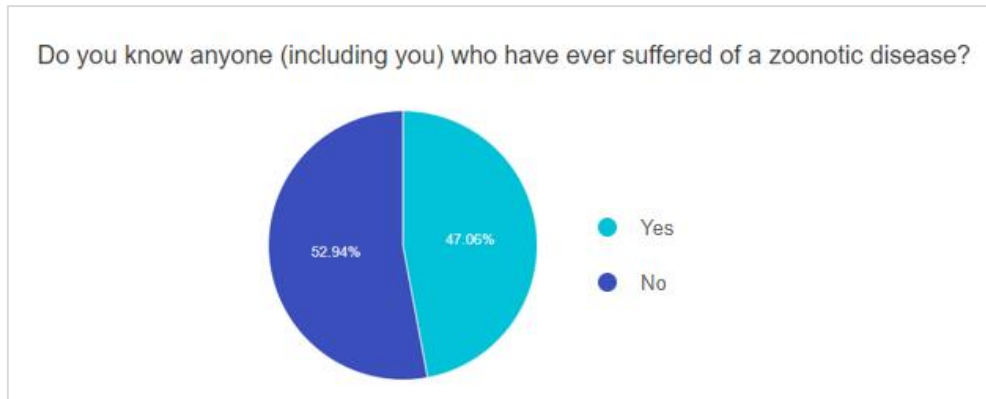

[Tapez ici]

In addition, thank you for sharing with us the most difficult aspects of your job, such as:

- Musculoskeletal disorders
- Road risks linked to the significant number of kilometers travelled.
- Poor restraint of cows
- Poor heat detection so not always called at the right time

And finally, we would like to highlight a point that caught our attention. You are more than 47% to know someone who has already been exposed to a zoonosis!

Why pay attention to zoonoses?

Zoonoses are animal diseases transmissible to humans, impacting:

Human health

- Dramatic results : abortion, incurable diseases
- Clinical aftermath

Farm biosecurity

- Transmission of biological agents by hands and materials
 - From animal to animal
 - From farm to farm
- Pours zootechnical results
- Livestock slaughters

Employers profitability

- Lack of efficiency of workers
- Poor work performance
- Work days lost
- Costly treatments needed
- Mandatory declaration

IMV technologies having at heart to provide quality products and to ensure protection against these diseases, has taken the step of CE certifying the protective gloves. Do not hesitate to consult:

- Zoonoses flyer : <https://www.imv-technologies.com/documents/POLYSEM-zoonoses-GB.pdf>
- Our gloves range: <https://www.imv-technologies.com/products-lines/gloves-and-protection-polysem-and-imv>.

Protect yourself!

Best regards

Maxime et Ludivine.
